

Abstract

A cover, in particular for generators, having an intake stub (19) with an air inlet opening (40) is proposed, wherein the intake stub (19) forms an air guide (22) and has a
5 connection (25) for a further intake element (28). The cover cap has a central axis (49), on the outer circumference (46) of the connection (25), that has a different direction from an air guide center line (52) in the region of the connection (25).
